

Activation of Retinoic Acid Receptors by Dihydroretinoids

Data Supplement

Files in this Data Supplement:

- [Data Supplement](#) - Fig. S1. Response of F9-RARE-LacZ reporter cell line to atRA alone and atRA plus DRA. SIL15-RA cells (Wagner et al., 1992) were stimulated for 24 h with indicated concentrations of atRA either by itself, or combined with either 10⁻⁷ M (R)-DRA or 10⁻⁷ M (S)-DRA. Cells were lysed, and assayed for expression of β -galactosidase.
